

CAMERAS LEFT UNSECURED (TECHNOLOGIST BENN JORDAN) · SCRIPT A

Open livestreams are not a theoretical risk

About 2.8 min at ~140 words/min · 393 words · Replace [Your Name]. Speak calmly. One speaker, one focus.

Tip: swap bracketed fields. Cite numbers carefully. End with the cancel / yearly-vote ask.

Mayor Crawford, members of City Council. My name is [Your Name], and I live in Crossville.

I want to talk about security in concrete terms: what researchers and newsrooms documented.

In late 2025, technologist and independent researcher Benn Jordan showed Flock Condor cameras, the company's pan-tilt video units that track people, streaming on the open internet with no username, no password, and no encryption. He found admin interfaces through a commercial device search engine, using queries like "Flock Admin" on Shodan, not by hacking a locked vault. Researcher Jon Gaines, who publishes security findings as GainSec, expanded the set to dozens of live feeds and debug panels. 404 Media verified roughly sixty exposed Condors nationwide. Reporter Jason Koebler recorded himself crossing a street median at Harris Road and Young Street in Bakersfield, CA, and watched himself livestream while colleagues watched remotely. Jordan filmed himself on Peachtree Creek Greenway feeds that auto-tracked him. The Verge summarized the same failure. Local television newsrooms, including Denver's 9NEWS and West Palm Beach's WFLX, told their viewers the company confirmed exposed live police camera feeds.

That is not a privacy activist rumor. That is a product-security failure covered by national tech press and local television news.

Crossville may not run Condor models today. That is not the point. The point is whether we can trust this company. When a company's cameras can be found wide open on the public internet, "trust our cloud" is not a policy.

Has Crossville received written notice of any exposure affecting Tennessee partners? What breach-notification and security terms are in the live contract? I am asking this body for answers on the record: which Flock models Crossville runs or plans to run, whether any Tennessee partner received exposure notices, and what breach-notification deadlines exist in the contract. A vendor that left live police cameras on the open internet has already shown it cannot be trusted with live feeds.

THE ASK (say this)

My ask is clear. Cancel Crossville's Flock contract and remove the cameras. Require a public hearing and a recorded City Council vote before any surveillance equipment is ever proposed again. If you will not cancel yet, take a recorded yes-or-no vote each year before any renewal, with no automatic renewal that skips a public vote, and publish monthly use reports the public can check. Thank you. I yield.
